Gaming

Lotteries 1H26 Preview - A Series of Unfortunate Jackpots

The Lottery Corporation (Neutral, $5.88/sh valuation)

Reporting Date: Wednesday 18th February, 10:30am AEST (Link)

Unfortunately for TLC, the poor run of luck from FY25 continued into 1H26. We estimate that Powerball finished in the 35th percentile and Oz Lotto in the 6th percentile. However, Powerball was also impacted by a much slower sequence than what we saw in FY25. This was something that we previously flagged in our FY25 preview note (see here) and was the primary reason why we were below consensus heading into FY26.

Heading into 2H26, we believe TLC's lottery portfolio is in a much stronger position. Powerball has the greatest upside due to the 20c price increase last November, which thus far appears to be a big success. Like-for-like jackpot entries have been robust despite the price increase, and we expect management to have a much greater capacity to accelerate the jackpot sequence. The other game we are seeing strong momentum in is Saturday Lotto. The game had been in decline post COVID, but appears to have turned a corner following the game change last May.

We currently sit marginally below consensus for 1H26. However, overall we don't expect any major surprises on the result day given the available market data. The key numbers to look out for are opex and digital penetration.

Jumbo Interactive (Positive, $16.35/sh valuation)

Reporting Date: Wednesday 25th February

Jumbo's result will continue to have some level of correlation to TLC given their lottery retailing business remains their largest overall. However, we expect Jumbo to be even more adversely affected given their portfolio skew. Jumbo over-indexes on Powerball & Oz Lotto with ~75% of lottery retailing from these games vs. ~55% for TLC. As such we also sit below consensus 1H26 numbers for Jumbo.

Over the long-term, we expect Jumbo's correlation to TLC to decrease every year as Jumbo expands into other categories and executes on its bolt-on M&A strategy. 1H26 was a very active period for Jumbo in this regard, with two acquisitions and new contracts with the RSL Art Union & Brightstar. We expect to hear more from management about the progress of these acquisitions at their result.

Our Forecasts vs Consensus (pg. 21)

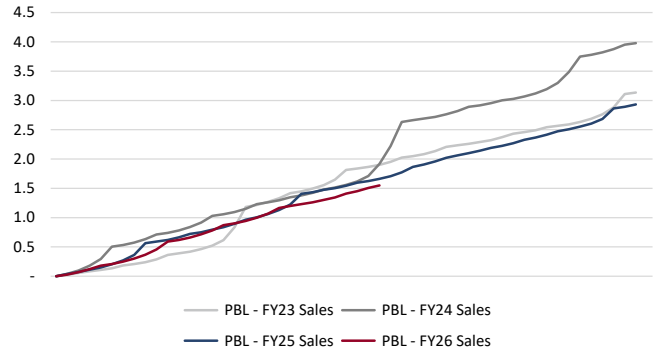

Powerball

1H26 Performance

Powerball sales fell -8.9% vs. 1H25. The three main factors driving this were:

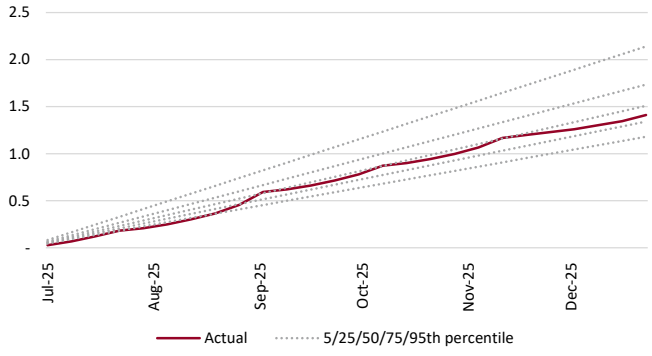

- Slower Sequence - negative catalyst
  - We had previously flagged in our FY25 preview note (see here) that Powerball would need to slow the sequence down after an extended period of acceleration that depleted the prize reserve fund.
- Game Change - positive catalyst
  - Powerball had a 20c price increase in November (benefitting the final 8-weeks of the half).
  - We explored the game change impacts in our recent deep dive (see With great Powerball comes great responsibility).
- Better Luck - positive catalyst (relative to the pcp).
  - Using our Monte Carlo simulator (which we first introduced in Burger with The Lott), we estimate that Powerball sales were in the 35th percentile for 1H26. Although we would still consider this unlucky (relative to the 50th percentile), we estimate that 1H25 Powerball sales were in the 22nd percentile.
  - This implies that Powerball sales actually fell yoy despite comparatively better luck. We estimate that the 50th percentile outcome for 1H26 was -14.8% below 1H25, primarily driven by the slower sequences.

Exhibit 2 - Powerball Sales (A$bn, 1H26) relative to Monte Carlo Simulation Percentiles

Source: Company Data, E&P Estimates

Sequence Acceleration / Prize Reserve Fund

Powerball has both a base sequence and an accelerated sequence that have been fairly consistent over the past 5-years.

- Throughout FY25, the base sequence was $4m, $12m, $20m, $40m, $60m, $100m.
- The accelerated sequence was $10m, $20m, $30m, $50m, $100m.

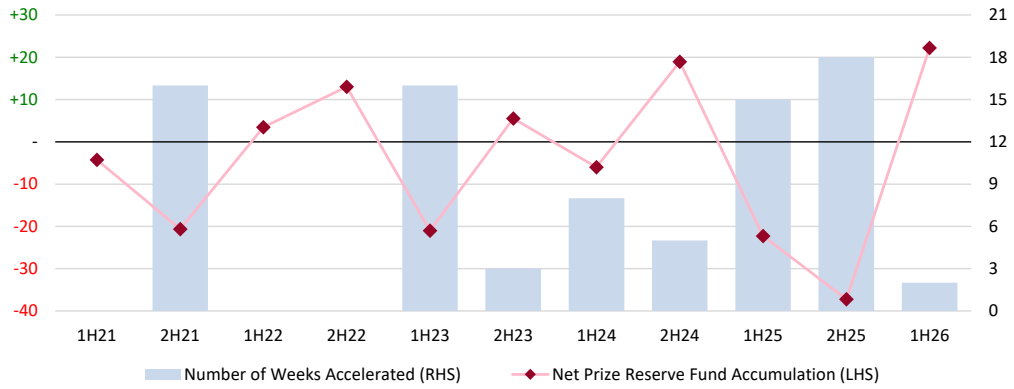

The accelerated sequence will theoretically earn more sales. However, it is likely to depreciate the prize reserve fund in most instances. In FY25, Powerball used the accelerated sequence for 33/52 weeks, far more than any of the previous four years.

- We estimate that given this acceleration, 1H25 & 2H25 were the two periods with the largest depletion of the prize reserve fund since the Apr-18 game change.

As mentioned above, Powerball used a much slower sequence in 1H26 than in FY25.

- For 24/26 weeks, Powerball's sequence was $4m, $12m, $20m, $30m, $50m, $80m. This is the slowest since the May-23 game change.
  - A slower sequence was necessary to build back up the prize reserve fund. The above sequence is highly likely to result in sequence surpluses no matter what the winning jackpot is (see With great Powerball comes great responsibility).
- Only 2/26 weeks were using the accelerated sequence. These were the final two weeks of the year.
- The largest jackpot of the half was an $80m jackpot in the 6th week of the sequence.
  - Using the accelerated sequence, Powerball would instead hit $150m by the 6th week.

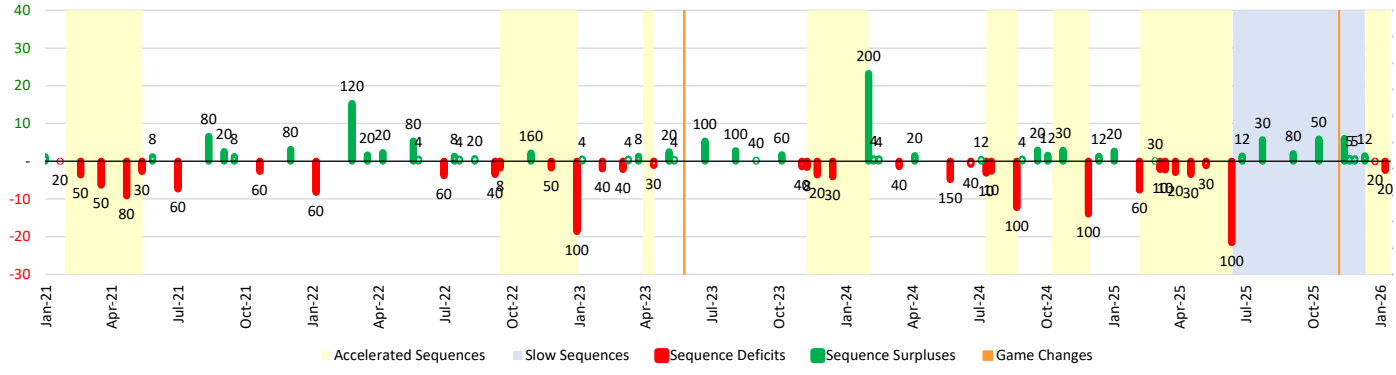

Exhibit 3 - Powerball Net Prize Reserve Fund Accumulation (LHS, A$m) & Number of Weeks using the Accelerated Jackpot Sequence (RHS)

Below, we demonstrate the accumulation/depletion of the prize reserve fund for each sequence over the past five years.

Exhibit 4 - Powerball Net Sequence Prize Reserve Fund Accumulation (A$m) - jackpot as label (A$m)

Source: Company Data, E&P Estimates

Like-for-Like Jackpot Entries / Game Change

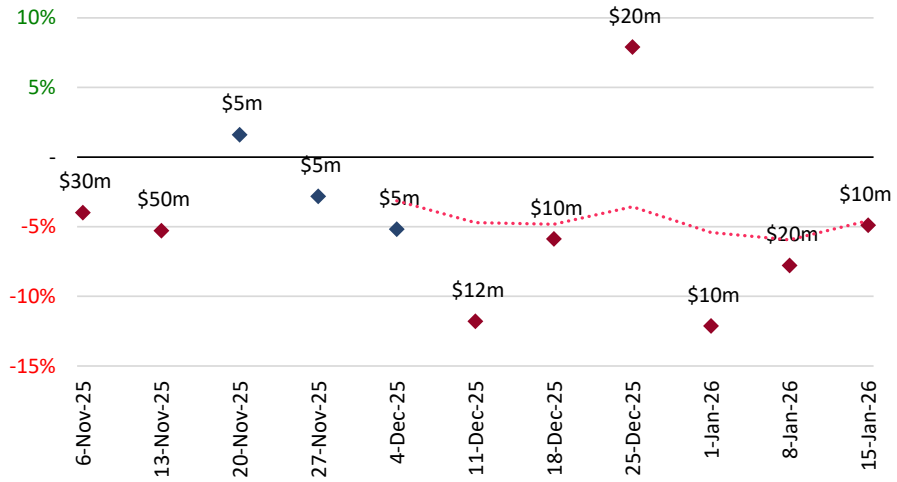

The other key driver to look at when evaluating the performance of Powerball is the underlying demand represented by like-for-like (LFL) jackpot entries. Below we have tracked the LFL jackpot entries since the Nov-25 game change vs. the 12 months pre game change.

Typically, price increases will result in fewer entries for each LFL jackpot. This is usually some combination of players not wanting to increase their overall lotteries spend or because they feel like they are getting less value for the same Div-1 jackpot prize. However, the decline in entries has historically been less than the corresponding increase in ticket price; i.e. some inelasticity of demand.

For Powerball, management are targeting a 50% to 75% retention rate (i.e. -8.3% to -4.2% decrease in entries). This is in-line with the historical range they have observed for game changes. Thus far, Powerball appears successful in achieving this. The first 11x draws have yielded an average decline in entries of -4.6%. When accounting for the ticket price increase, sales have increased by an average of +11.5%.

A decline in LFL jackpot entries also decreases the probability of the jackpot going off. This will over the medium/long run increase the probability of reaching larger jackpots.

Exhibit 5 - Change in Powerball Like-for-Like Jackpot Entries vs. the 12 months pre game change (Nov-25)

Source: Company Data, E&P Estimates. Note: Comments are like-for-like jackpot size. $5m jackpots are compared to $4m jackpots.

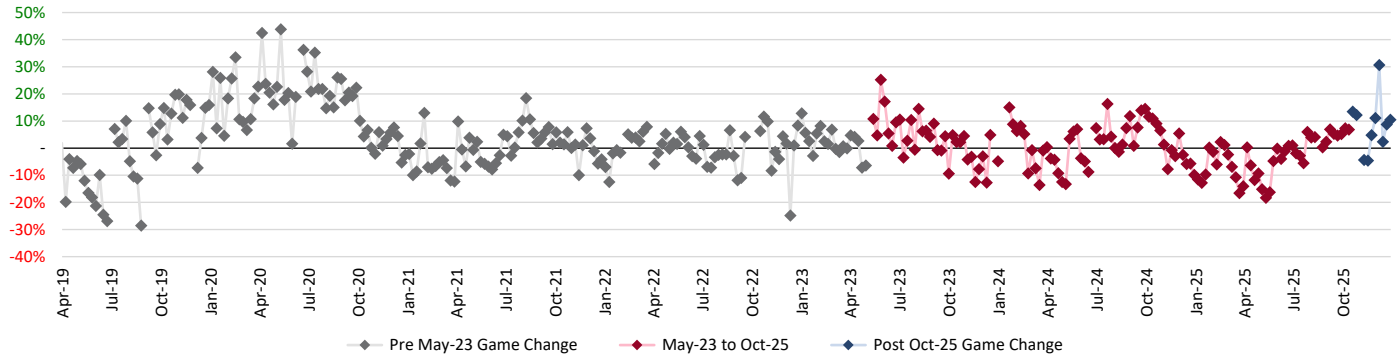

Exhibit 6 - Change in Powerball Like-for-Like Jackpot Entries & Sales post Nov-25 game change vs. the 12 months pre game change

Date	Jackpot ($m)	Entries (m's)	Sales ($m)	Entries Change	Sales Change	Note

Wt. Average				**-4.3%**	**+11.8%**	

Source: Company Data, E&P Estimates

When looking at Powerball over the long-run, LFL jackpot sales are now in one of its strongest periods of yoy growth since covid.

Exhibit 7 - YoY growth in Powerball Like-for-Like Jackpot Sales (i.e. incl price changes)

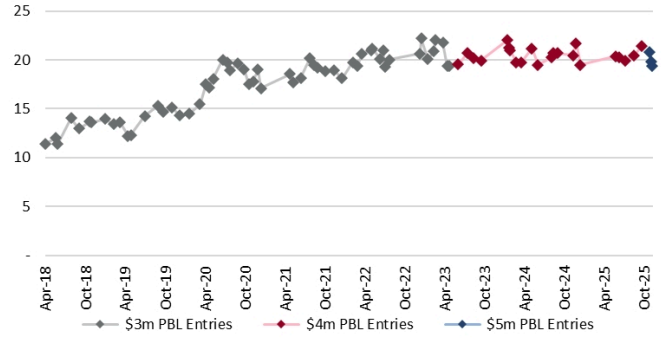

Source: Company Data, E&P Estimates

An interesting long-term trend we have observed is the growth in demand for the starting Powerball jackpot. Sales for these are almost 2x larger than they were in 2018.

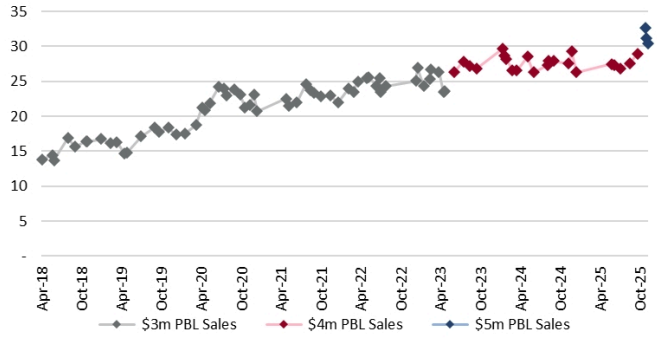

Interestingly, each increase in jackpot size has had less growth relative to the 2018 baseline (i.e. starting jackpots have grown more than $12m jackpots, which have grown more than $20m jackpots etc). This trend concludes with $100m jackpots which are actually indexing lower than the baseline. This is due to both an increase in $100m+ jackpot frequency which decreases the mystique of the 9-figure prize and also a tough comp given the Aug-18 $100m draw was the first in the games' history.

Source: Company Data, E&P Estimates

Oz Lotto

1H26 Performance

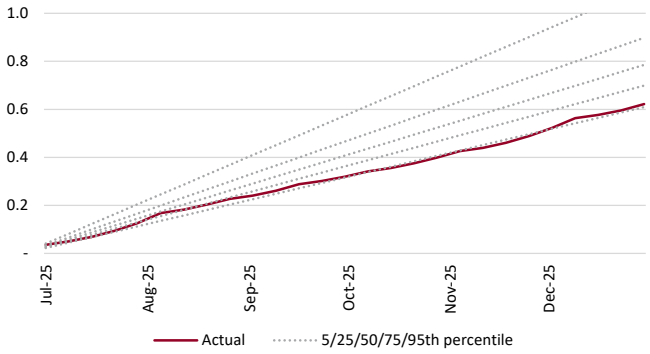

Oz Lotto had an unlucky half and finished in the 7th percentile. The sequences consistently reached low-to-mid level jackpots but did not exceed $30m throughout the period. Relative to 1H25, sales were only down -4.5%. However, 1H25 used slower sequences and Oz Lotto is about to comp against a $100m jackpot in the pcp.

Exhibit 11 - Cumulative Oz Lotto Sales (A$bn, y-axis) by week in year (x-axis) - YTD

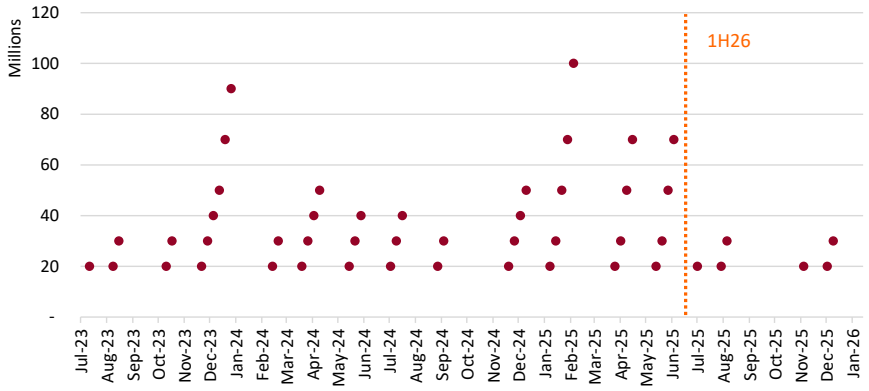

Source: Company Data, E&P Estimates

Exhibit 12 - Oz Lotto Sales (A$bn, 1H26) relative to Monte Carlo Simulation Percentiles

Source: Company Data, E&P Estimates

Exhibit 13 - Oz Lotto Jackpots >= $20m

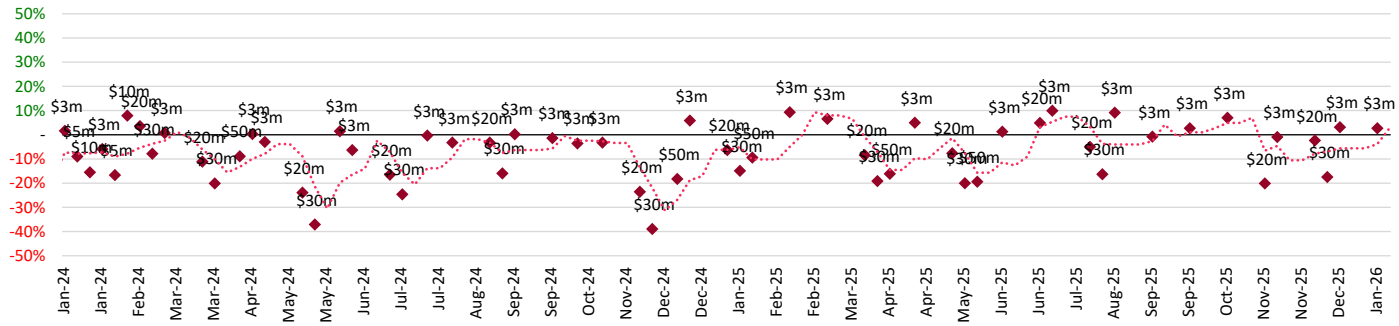

Source: Company Data, E&P Estimates

Like-for-Like Jackpot Entries

Oz Lotto's LFL entries do not appear to show any material change over the past two-years. The two weaker spots are from draws immediately before $150m & $100m Powerball jackpots. We have previously explored inter-portfolio cannibalisation in our Initiation (see here).

Exhibit 14 - Change in Oz Lotto Like-for-Like Jackpot Entries vs. the 12 months pre game change (May-22)

Source: Company Data, E&P Estimates

Saturday Lotto

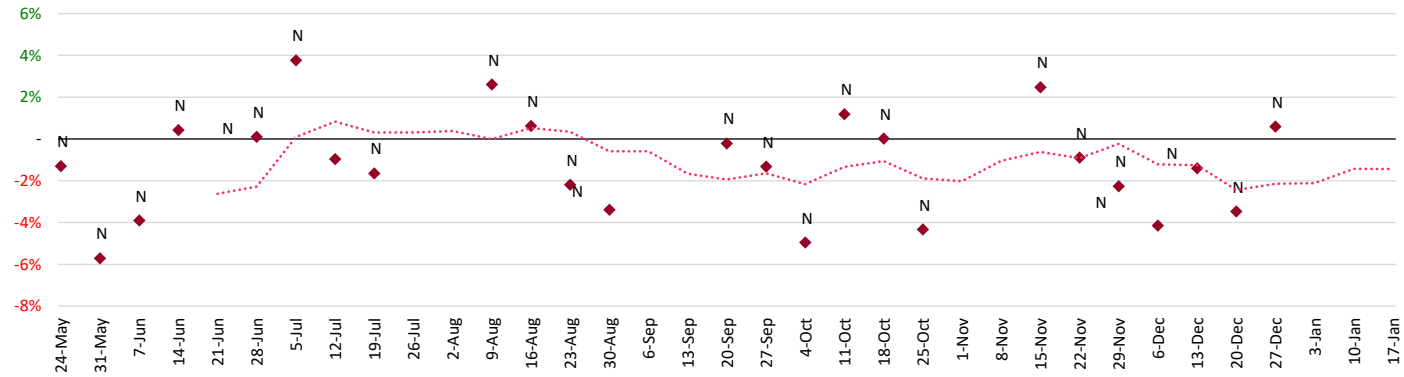

Like-for-Like Jackpot Entries

The key short-term observation for Saturday Lotto is the impact of the game change in May. The changes included a 10c increase in the subscription price and minor adjustments to the prize allocations. The primary objective of the change was to sustain the division one prize at around $6m (previously around $5m).

The game change was designed to be predictable, as Saturday Lotto is Australia's heritage lottery game and typically skews towards older players who play the same numbers.

Thus far, the game change can be deemed a success. Of the twenty-five normal draws, entries have only declined by an average of -1.2%. This is despite a +13.3% increase in the subscription price.

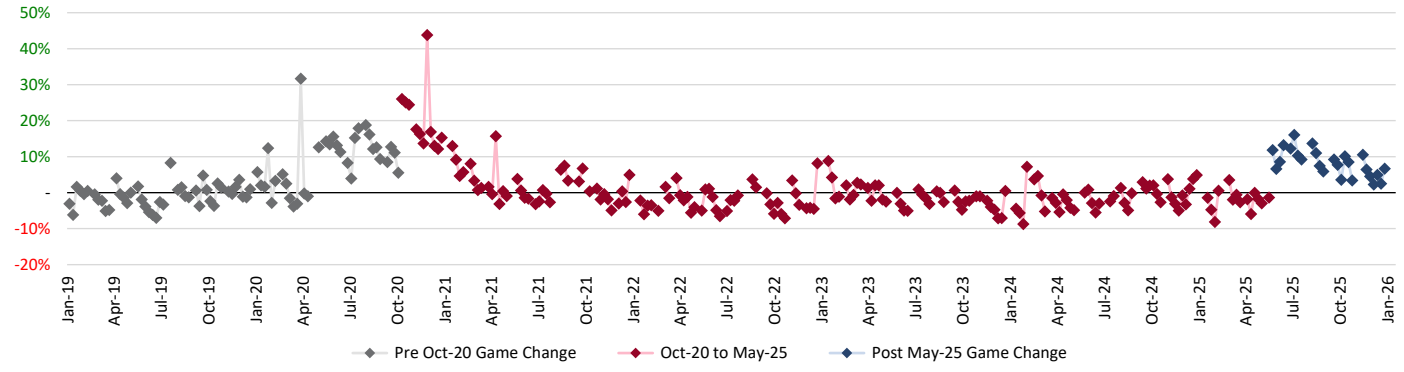

Exhibit 15 - Change in Saturday Lotto Normal Jackpot Entries vs. the 12 months pre game-change (May-25)

Source: Company Data, E&P Estimates

This has led to the strongest period of Saturday Lotto yoy growth since covid.

Exhibit 16 - YoY growth in Saturday Lotto Like-for-Like Jackpot Sales (i.e. incl price changes)

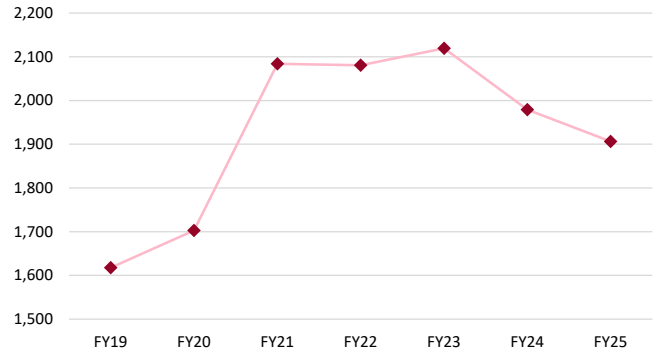

Source: Company Data, E&P Estimates

Prize Reserve Fund

Saturday Lotto's sequence is largely at the discretion of TLC's management and therefore is not subject to the same luck component as Powerball & Oz Lotto. However, it is still the second-largest game and sees some variation in turnover based on the timing of Super/ Megadraws.

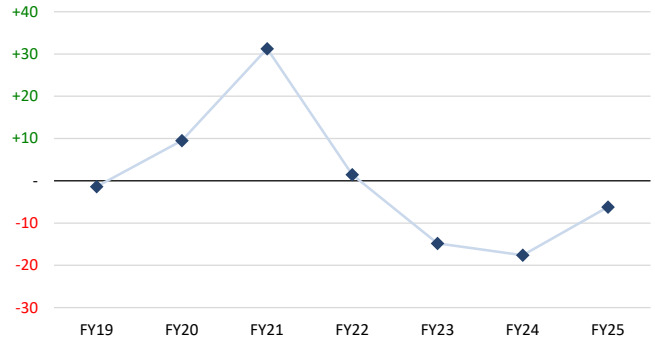

We had previously written about our view that management had been attempting to smooth Saturday Lotto's performance (see here). FY21 saw a significant increase in LFL entries, which resulted in an overall increase in subscriptions. However, rather than immediately add more $20m Superdraws or $30/$40m Megadraws, management built up the prize reserve fund. Thus, from FY23-FY25, management has been able to prop up extra Super/Mega draws to offset the declining LFL entries.

Exhibit 17 - Saturday Lotto Subscriptions (A$m)

Source: Company Data, E&P Estimates

Exhibit 18 - Saturday Lotto Net Prize Reserve Fund Accumulation (A$m)

Source: Company Data, E&P Estimates

Management can only prop up the game for as long as they have the prize reserves to do so. As we showed above, these had been depleting. However, May-25 game change appears to have stabilised the game. Below we show that although Saturday Lotto subscriptions only grew +0.4% hoh in 1H26, it did so with a significant prize reserve fund accumulation (i.e. far more sustainable). The timing of the $30m mega draw also fell in January (often NYE). As such, we would expect growth again in 2H26.

Exhibit 19 - Saturday Lotto Subscriptions and Net Prize Reserve Fund Accumulation

Period	Subscriptions	Net PRF Accumulation
2H22	940,748,291	-926,699
1H23	1,139,348,403	-10,135,373
2H23	980,013,117	-4,683,114
1H24	1,035,199,623	-5,132,581
2H24	943,901,075	-12,474,122
1H25	902,931,200	+4,867,456

1H26	**1,007,245,246**	**+7,210,111**

Source: Company Data, E&P Estimates

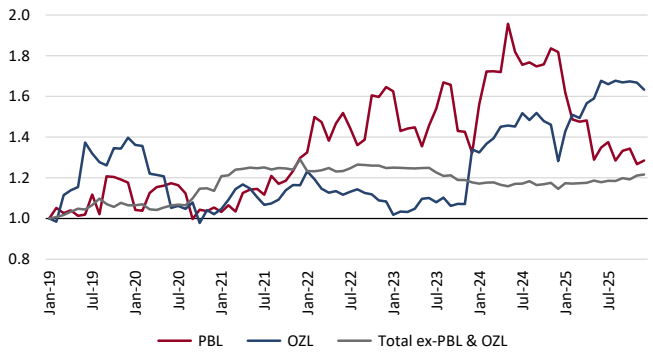

Long Term Trends

Below we demonstrate the longer-term performance of TLC's portfolio. Naturally, the two jackpot games, Powerball & Oz Lotto, have the most volatility given the structure of the games. Relative to pre-covid, both have outperformed the non-jackpot games.

The non-jackpot games saw an initial boost during covid, but have gradually receded since. The chart on the right demonstrates that each non-jackpot game is now below their respective Jan-21 index, except for Weekday Windfall which saw some recent momentum from the Friday extension. Given the initial success of the Saturday Lotto game change, we would now expect this game to jump back above its Jan-21 index as well.

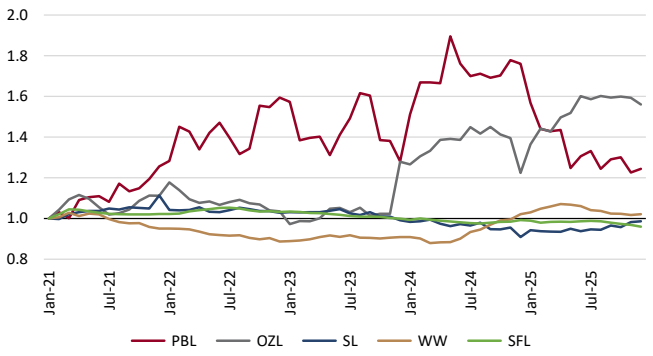

Over the long-term, we expect the jackpot games to continue to outperform the non-jackpot games. This is due to these games being more popular with younger demographics.

Foreign Matched Lotteries

The Lottery Office (TLO) and other overseas retailers continue to be viewed by the market as a source of potential competitive risk. We previously did a deep dive into TLO's US operations, scale, and impact on TLC (see note). Since our publication, the AFR has reported that Communications Minister Michelle Rowland has started a review into offshore lottery providers and online keno distributors.

While there hasn't been any update on the status of the Australian review, TLC have still made progress in their pursuit of a crackdown. Following pressure for the Powerball & Mega Millions consortium, the Oregon Lottery recently announced new rules around courier services (see here).

The main new rule that could make operations difficult for TLO & other overseas retailers would be as follows:

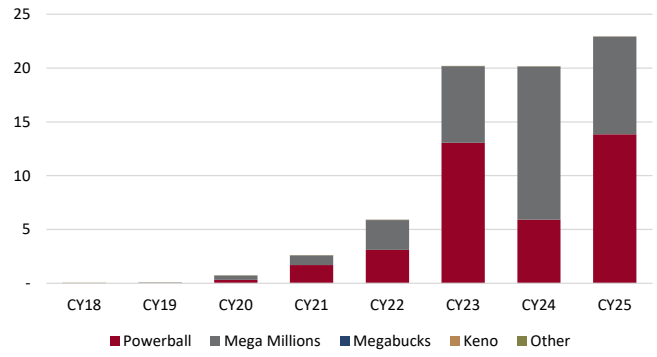

- "Under no circumstances may a retailer knowingly facilitate the sale of lottery tickets to any person who is physically located outside the state of Oregon through a courier service or any other method."

We believe this would make TLO's existing operations in Oregon difficult, but does not entirely eliminate their business model. This is because customers of TLO do not purchase an Oregon Lottery ticket for either the US Powerball or Mega Millions. They enter a Northern Territory licensed Australian lottery, where prizes are backed/insured by purchasing a matching ticket overseas. If the new rules do preclude their current Oregon operations, they simply need to find another way to fund the prize if a customer wins. We believe this could be achieved by either insurance or simply moving to another state. As of the time of writing this report, TLO still appears to be operating as business as usual from a customer perspective.

Any crackdown would be a positive catalyst for TLC & Jumbo.

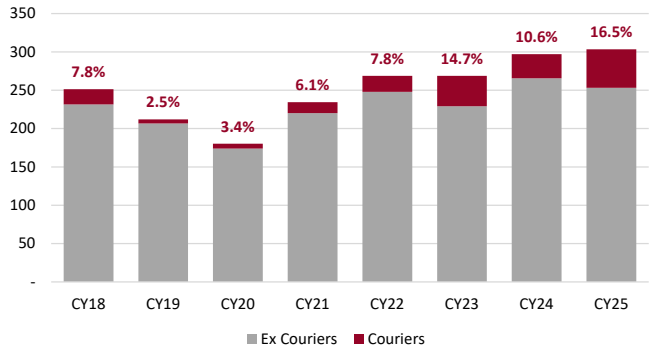

- We would expect a minor uplift in LFL jackpot entries, increased digital penetration, a reduction in advertising competition and a reinforced status as a monopoly operator / reseller.
- However, at this stage, we are still wary that TLO and other resellers could find alternative loopholes that offer lottery-like products.
- Thus, we have not assumed any uplift to LFL entries in our forecasts, but remain wary of this potential catalyst, particularly for Powerball.

Charity Lotteries

Australian Charities

In the next section we take a brief look at charity lotteries, which are a small competitor to both TLC & Jumbo's B2C businesses. They also form a part of Jumbo's B2B SaaS business.

Below we show that the charities that have partnered with Jumbo have outperformed the non-Jumbo SaaS clients over the past few years. In particular, the Mater Foundation has seen a phenomenal growth in sales from $52.8m in FY21 to ~$132.7m in FY25 (+25.9% CAGR). This is after experiencing very little growth from FY15 to FY20 (pre-Jumbo).

Exhibit 25 - Lottery Revenue from Major Australian Charities (A$m)

	Units	FY14	FY15	FY16	FY17	FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25E

Transitioned to Jumbo SaaS Platform ### Estimate based on major prizes

Transitioning to Jumbo SaaS 1Q27

Source: E&P Estimates, Company Data, Charity Data, ACNC. Note: RSL Art Union are CY's. Endeavour, Deaf Lottery & Surf Life Saving are fundraising/commercial income which we believe are majority lotteries.

Exhibit 26 - Charity Lottery Revenue Index (FY14 = 1.0)

Source: E&P Estimates, Company Data, Charity Data, ACNC. Note: RSL Art Union are CY's. Endeavour, Deaf Lottery & Surf Life Saving are fundraising/commercial income which we believe are majority lotteries. Deaf Lottery Adoption was FY22.

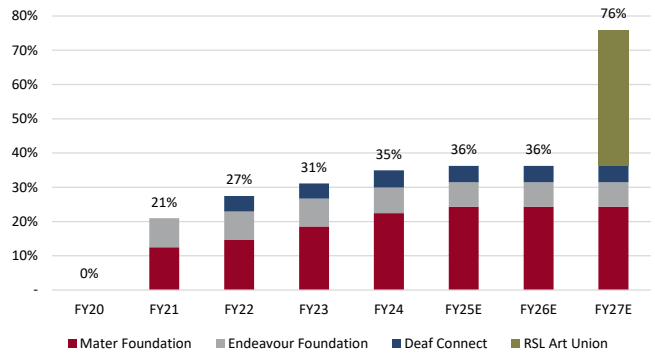

In September last year, Jumbo announced that it had reached a SaaS agreement with Dream Home Art Union (run by RSL Queensland, see announcement here), the largest charity lottery in Australia. The agreement commences in 1Q27 for an initial five-year term, with options to extend for up to six more years. Our current forecasts assume that this agreement represents a ~$4m annual uplift in revenue for Jumbo. This is based on a 2% fee share of ~$200m Dream Home Art Union annual sales.

Exhibit 27 - Dream Home Art Union

Source: RSL Queensland

Exhibit 28 - % of the top-6 Australian Charities that use Jumbo's SaaS platform

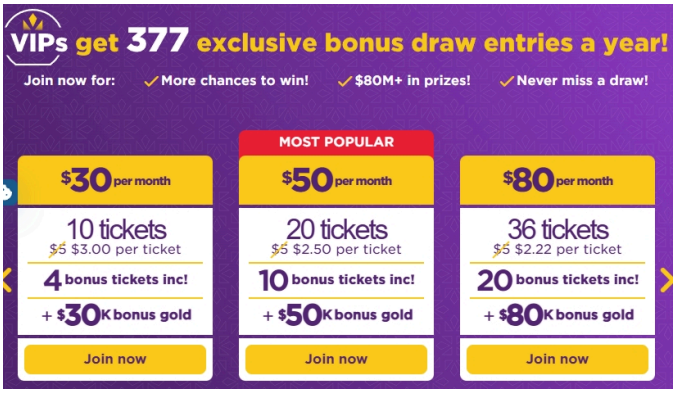

Source: E&P Estimates, Company Data, Charity Data, ACNC.

One recent observation about charity lotteries is an increase in the marketing of recurring memberships. For example, the two largest charity lotteries Dream Home Art Union & the Mater Foundation both have VIP clubs. This may be the natural direction that charity lotteries would have headed, but we believe this concept has been accelerated by the growth in rewards clubs such as LMCT+ (see our Jumbo Initiation for a deep dive).

Over the last few years, charity lotteries have consistently pushed for government's to crack down on these types of businesses. Thus far they have been largely unsuccessful. The only exception has been in South Australia where most of the rewards clubs no longer operate.

Whilst we expect these charities to continue to pursue a crackdown or stricter regulation, their approach currently seems to abide by the expression "If you can't beat them, join them". In May last year, the Dream Home Art Union secured a NSW trade promotion permit and appears to be offering both giveaway style prizes in conjunction with their traditional home lottery draws.

UK Market

Market Size

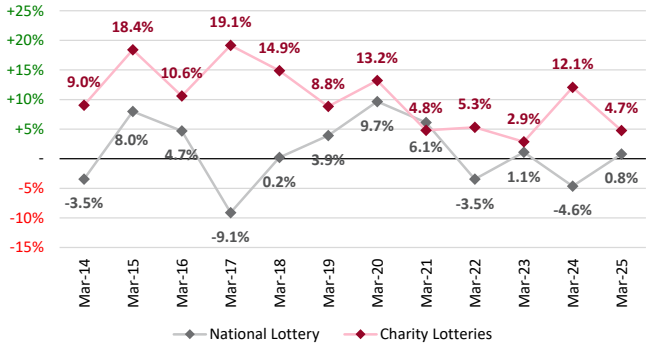

In the UK, society (charity) lotteries have increased their proportion of total lottery sales at a faster rate than Australia, growing from just 3.4% for the year ending Mar-09 to 12.4% in Mar-24.

Exhibit 33 - UK Annual Lottery Sales (£bn.) - Charity Lottery % as Label

Source: UKGC, E&P Estimates

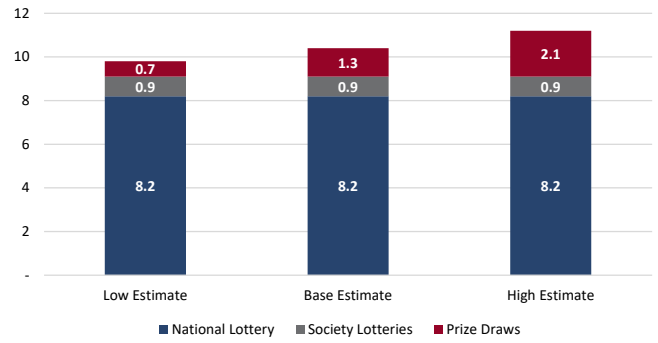

Exhibit 34 - UK Annual Lottery Sales Growth

Source: UKGC, E&P Estimates

In a similar manner to Australia, UK charities have been urging the government to crackdown on the prize draws and competitions (PDC's). The PDC market is believed to have had a 3-year CAGR ~25% and now generate more sales than the Society Lottery market (~£1.3bn vs ~£0.9bn). Jumbo's recent acquisition Dream Car Giveaways (see here) falls into this category.

Exhibit 35 - UK Gambling Sales by Category (£bn.)

Source: UK Government, E&P Estimates

New PDC Voluntary Code of Practice

The UK government undertook an initial review on the PDC industry in June (see here) where they subsequently introduced a Voluntary Code of Practice in November (see here). This was the softest of the three options initially proposed.

The code is mainly focused on improving player protections. Below we list some of the main new standards from the code:

- A £250 monthly cap on credit card entries for prize draws.

- A complete ban on credit card entries for all instant-win competitions.
- The ability for players to set spending caps and self exclude.
- A commitment to ensure free entry routes are sufficiently publicized.
- 18+ only age verification.
- Complaints handling processes & harm resources.
- Greater transparency measures.

Currently, 139 PDC operators have signed the Voluntary Code which is expected to be implemented by the 20th May 2026. This includes nine of the top eleven PDC's by market cap which account for ~93.0%. The effectiveness of the Voluntary Code will determine whether the UK government takes further steps, including potential legislation.

Winvia Entertainment PLC

Winvia Entertainment is the second largest (by market share) PDC operator in the UK behind Omaze. The group also runs a cash generative Romanian online gaming business, currently 51% of AEBITDA, albeit management expect that the PDC part of the business will be the dominant segment in the foreseeable future.

The group owns PDC brands, Best of the Best (BOTB) & Click Competitions (Click) which they acquired in Apr-25. The acquisition came at a multiple of 4.6x AEBITDA, somewhat cheaper than Jumbo's acquisition of DCG which was at 6.5x AEBITDA. They expect M&A to be a key part of their strategy moving forward and have been in discussions with several potential acquisition targets.

Winvia recently IPO'd on the London Stock Exchange in Nov-25 and currently has a market cap of ~£230m. The company is majority owned by Teddy Sagi (69.5%), an Israeli billionaire businessman and founder of gambling software company Playtech (previously subject to a £2.1b takeover bid from Aristocrat in Oct-21).

Changes to Forecasts and Valuations

We have made the following changes to our overall forecasts

TLC

- Minor downgrades to 1H26 turnover.
  - This is primarily driven by bad luck as a negative catalyst but partly offset by an uplift in LFL jackpot entries for Powerball & Saturday Lotto.
  - Small reduction in 1H26 opex to reflect the lower advertising requirements of the weaker jackpot period.
- Upgrades to our turnover forecasts for 2H26 and beyond.
  - The Powerball game change has thus far exceeded our expectations due to the strong retention of the 20c price increase.
  - We are also seeing better than expected momentum from Saturday Lotto underlying entries.

Our valuation increases to $5.88. We retain our neutral recommendation given our FY27 forecasts remain below consensus expectations.

Jumbo

- The same turnover assumptions as TLC above.
- Reduced market share for 1H26 due to product mix.
  - Jumbo over-indexes on Powerball & Oz Lotto with ~75% of lottery retailing from these games vs. ~55% for TLC.
- Other minor tweaks to match AGM guidance
- Increased our service fee assumptions for Jumbo's reseller agreement with TLC post 2030.

Our valuation decreases to $16.35 and we retain our positive recommendation.

RESEARCH RECOMMENDATION DEFINITIONS

Positive	Stock is expected to outperform the S&P/ASX 200 over the coming 24 months.
Neutral	Stock expected to perform in line with the S&P/ASX 200 over the coming 24 months.
Negative	Stock is expected to underperform the S&P/ASX 200 over the coming 24 months.
Speculative Buy	Stock has limited history from which to derive a fundamental investment view or its prospects are highly dependent on event risk, e.g. Successful exploration, scientific breakthrough, high commodity prices, regulatory change, etc. Consequently, the stock is considered a high-risk investment which may be prone to high volatility in share price movements, have a greater risk of capital loss and/or the stock may have low liquidity.
Suspended	Stock is temporarily suspended due to compliance with applicable regulatory and/or E&P policies in circumstances where E&P is acting in an advisory capacity.
Not Rated	Stock is not included in our investment research universe.

Research Criteria Definitions

Recommendations are primarily determined with reference to how a stock ranks relative to the S&P/ASX 200 on the following criteria:

Valuation	Composite of Rolling 12-month prospective multiples and discounted cash flow (DCF), or DCF for resource stocks.
Earnings Outlook	Forecast 2-year EPS growth.
Earnings Momentum	Percentage change in the current consensus EPS estimate for the stock (rolling 1-year forward basis) over the consensus EPS estimate for the stock 3 months ago.
Shareholder Returns	Composite of forecast ROE (rolling 1-year forward basis) and the percentage change in ROE over 2 years.
Debt Servicing Capacity	Rolling 12-month EBIT Interest Cover ratio.
Cyclical Risk	Qualitative assessment of the 2-year outlook for a stock/industry's profit cycle.
Industry Quality	Qualitative assessment of an industry's growth/returns potential and company specific management capability.
Financial Transparency	If we don't understand it, we won't recommend it.

For stocks where Evans and Partners does not generate its own forecasts, Bloomberg consensus data is used. Analysts can introduce other factors when determining their recommendation, with any material factors stated in the written research where appropriate.

GENERAL RESEARCH DISCLAIMER, WARNING & DISCLOSURES

In Australia, this document is provided by Evans and Partners Pty Ltd ABN 85 125 338 785, holder of AFSL 318075, trading as E&P Research (**Evans and Partners**).

In Hong Kong, this document is issued by E&P Asia (HK) Limited (company number: 2918464) (**E&P Asia**) which is licensed under the Securities and Futures Ordinance (Cap. 571 of the laws of Hong Kong) (**SFO**) for Types 1 and 4 regulated activities (CE number: BPX011).

Please refer to the document entitled 'Research Conflicts of Interest Disclosure' available for download from the Important Disclosures section of our website (www.eap.com.au) and Evans and Partners' Financial Services Guide (FSG) which is also available on our website.

The information is **general advice only** and does not take into consideration an investor's objectives, financial situation or needs. Before acting on the advice, investors should consider the appropriateness of the advice, having regard to the investor's objectives, financial situation and needs. If the advice relates to a financial product that is the subject of a Product Disclosure Statement (e.g. unlisted managed funds) or other disclosure document, investors should obtain the PDS or other disclosure document and consider it before making any decision about whether to acquire the product.

The material contained in this document is for information purposes only and does not constitute an offer, solicitation or recommendation with respect to the purchase or sale of securities. It should not be regarded by recipients as a substitute for the exercise of their own judgment. Investors should be aware that past performance is **not an infallible indicator** of **future** performance and future returns are not guaranteed.

Any opinions and/or recommendations expressed in this material are subject to change without notice and none of Evans and Partners, its related companies, associated entities, or any of their respective officers, employees, agents, advisers or contractors (**E&P Group**) are under any obligation to update or keep current the information contained herein. References made to third parties are based on information believed to be reliable but are not guaranteed as being accurate.

This document is provided to the recipient only and is not to be distributed to third parties without the prior consent of Evans and Partners, or E&P Asia (in the case of Hong Kong).

HONG KONG

By accessing this document, the recipient represents and warrants they are a "professional investor" within the meaning of the definition of that term in Schedule 1 to the SFO. If this document has been received in error, please contact E&P Asia at 2812, Level 28, One Chinachem Central, 22 Des Voeux Road Central, Central, Hong Kong.

The contents of this document have not been reviewed by any regulatory authority in Hong Kong. If you have any doubt about any of the contents of this document, you should obtain independent professional advice.

No relationship is intended to be created between research analysts and recipients, except where necessary licenses and approvals have been obtained. Should you have any questions regarding this document, please contact E&P Asia on +852 2303 5787.

DISCLOSURE OF INTERESTS
One or more members of the E&P Group may have an interest in the securities or derivatives of any entities referred to in this material. The E&P Group does, and seeks to do, business with companies that are the subject of its research reports.
