FY26 Lotteries Preview - Where art thou Big Jackpot?

The Lottery Corporation (Positive, $6.05/sh valuation)

Reporting Date: Wednesday 19th August, 10:30am AEST (Link)

Unfortunately for TLC, the poor run of luck from FY25 continued into FY26. We estimate Powerball finished in the 12th percentile of theoretical outcomes and Oz Lotto in the 2nd percentile. The absence of large jackpots drives our forecast for revenue to decline -1.9% YoY, and to sit -9.6% below the record FY24 result, which had benefited from favourable jackpot luck.

We don't expect many surprises at the result later this week. TLC's numbers are typically fairly predictable given our tracking of the available lottery market data. Management also provided opex guidance at the June strategy day, and thus digital penetration is the main KPI that could drive an earnings surprise. We hope to hear more about the strategic initiatives flagged at the strategy day, such as more engaging digital gameplay features and a potential review of the lottery game portfolio, including Oz Lotto.

For FY27 we forecast a material uplift in lottery turnover (+9.4%), driven primarily by a reversion towards the 50th percentile outcome. We nonetheless sit below the market, given the softness in like-for-like jackpot entries we observed through 2H26, with our FY27 lottery turnover 5.2% below consensus.

Beyond FY27, we expect TLC to be a net beneficiary of the Albanese government's proposed gambling reforms, which are currently progressing through parliament. The proposed reforms are primarily focused on the wagering sector, but adjacent lottery-like products would also be prohibited should the initial draft pass as written.

The proposed ban on online keno would be a modest direct near-term headwind, though small in the context of the overall group. It could eventually be a net positive given how quickly its primary competitor, Lottoland, had scaled (see our Strategy Day Preview). The proposed bans on the other two adjacent lottery-like products (rewards clubs and foreign matched lotteries) are both very favourable. Separately, gaming machine reform in NSW is gathering momentum, which we also see as a source of potential upside. Overall, we believe lotteries should benefit from both reduced advertising competition and a share-of-wallet migration from other gambling products over the coming years. As such, our turnover forecasts exceed consensus from FY29 onward.

Although we are somewhat cautious on near-term momentum given the softer like-for-like jackpot entries, we believe TLC is well-placed over the medium to long-term. The two key upcoming catalysts we flagged at the 1H26 result were the Victorian Lottery Licence renewal and the federal review into foreign matched lotteries and online keno, the latter since folded into the broader gambling reform. Both of these have since seen favourable outcomes/movements. As such, we retain our positive recommendation. Our EBITDA forecasts for FY26-28 change by +0.9%/-5.0%/-1.1%, and our valuation declines 0.9% to $6.05.

Jumbo Interactive (Neutral, $8.28/sh valuation)

Reporting Date: Thursday 27th August, 10:30am AEST (Link)

Jumbo released FY26 guidance in July, so we don't expect any major surprises. Relative to TLC, we expect Jumbo to be even more adversely affected by the lack of jackpots given its portfolio skew - i.e. Jumbo over-indexes on Powerball & Oz Lotto with ~75% of lottery retailing from these games vs. ~55% for TLC. TLC's digital penetration next week will also be key to gauging Jumbo's online market share.

Over the long-term, we expect Jumbo's correlation to TLC to decrease each year as it expands into other categories and executes on its bolt-on M&A strategy. These are the topics we expect to hear more about at the result. Dream UK operates in an industry currently seeing significant regulatory and competitive change, while Dream US was the key beat at the recent guidance on the back of changes management has made since taking over. Any guidance on these two businesses would be the key numbers to watch. We make no change to our Jumbo forecasts following our recent update after its FY26 guidance in July (see here), and retain our Neutral recommendation.

Powerball

FY26 Performance

Powerball was impacted by a lack of large jackpots in FY26. Unlike the previous few years, there were no $100m+ jackpots.

Exhibit 1 - Powerball Jackpots >= $20m

Source: Company Data, E&P Estimates

Overall turnover grew +1.9% vs FY25. Within this, there are both positive and negative catalysts that had an impact:

Game Change - positive catalyst

- Powerball had a 20c price increase in November (benefiting 34/52 weeks).
- We explored the game change impacts in our recent deep dive (see With great Powerball comes great responsibility).

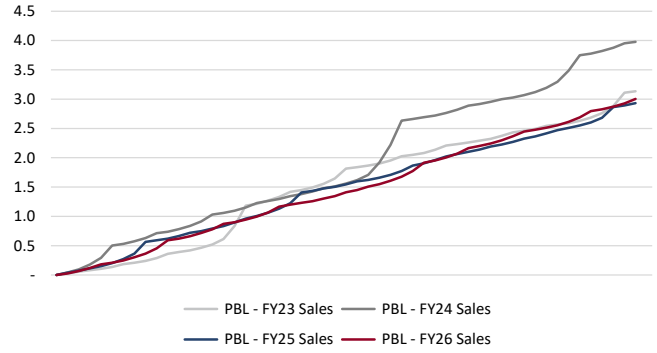

Slower Sequence - negative catalyst

- We had previously flagged in our FY25 preview note (see here) that Powerball would need to slow the sequence down after an extended period of acceleration that depleted the prize reserve fund. This was the primary reason we temporarily downgraded our recommendation.

Better Luck - positive catalyst (relative to the pcp).

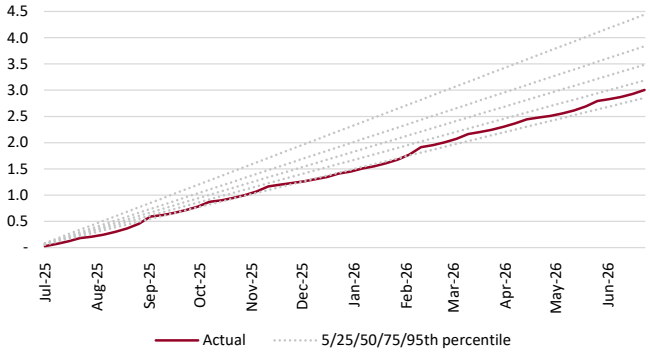

- Using our Monte Carlo simulator (first introduced in burger with The Lott), we estimate that Powerball sales were in the 12th percentile.
- Although we would still consider this unlucky (relative to the 50th percentile), we estimate that FY25 Powerball sales were in the 6th percentile.

Exhibit 2 - Cumulative Powerball Sales (A$bn, y-axis) by week in year (x-axis) - YTD

Exhibit 3 - Powerball Sales (A$bn, FY26) relative to Monte Carlo Simulation Percentiles

Source: Company Data, E&P Estimates. Note: Includes WA

Like-for-Like Jackpot Entries

One of the key drivers we look at when evaluating the performance of Powerball is the underlying demand represented by like-for-like (LFL) jackpot entries. For Powerball, these are particularly relevant given the game change in November.

Below we have tracked the LFL jackpot entries since the Nov-25 game change vs the 12 months pre game change.

- Typically, price increases will result in fewer entries for each LFL jackpot.
- This is usually some combination of players not wanting to increase their overall lotteries spend or because they feel like they are getting less value for the same Div-1 jackpot prize.
- However, the decline in entries has historically been less than the corresponding increase in ticket price; i.e. some inelasticity of demand.

Management were targeting a 50% to 75% retention rate (i.e. -8.3% to -4.2% decrease in entries) for the latest Powerball price increase. This is in-line with the historical range they have observed for game changes.

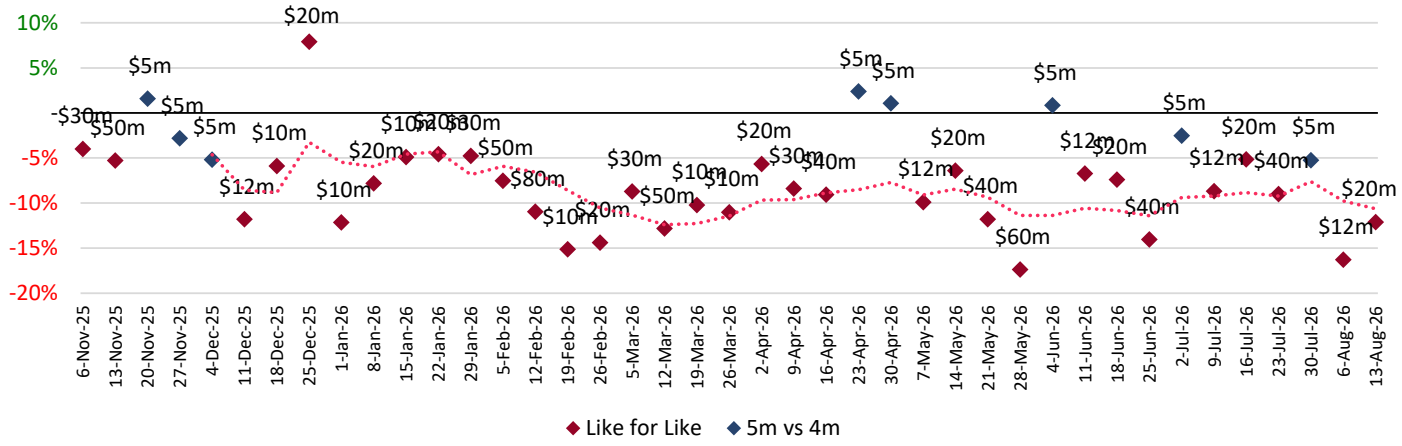

- In the initial months post the game change, Powerball was achieving this with a ~-5% decline. However, since February the LFL entries have seen a ~-10% reduction.
- On aggregate, the weighted average entries decline has been -8.1%. When accounting for the ticket price increase, sales have increased by a weighted average of +7.3%.

We suspect there are a few factors behind the recent softness.

- Consumer Sentiment
  - We believe lotteries are the most resilient gambling category, but nonetheless we suspect the recent petrol price pressure and low consumer sentiment would be factors for some players.
- Impact of Lottery Adjacent Categories
  - We believe that Charity Lotteries, Online Keno (Lottoland), Rewards Clubs & Foreign Matched Lotteries have all had varying degrees of impact on traditional lottery sales over recent years. As we previously described, we believe that the proposed Albanese reforms on Gambling will be a positive catalyst.
- Lack of Large Jackpots

- Although we have previously observed some level of fatigue if there are multiple large jackpots in quick succession, we suspect an overly-long absence is detrimental. Large jackpots provide the strongest marketing opportunities for TLC/Jumbo that are key to driving new customer sign-ups or reactivating sporadic players.

Exhibit 4 - Change in Powerball Like-for-Like Jackpot Entries vs. the 12 months pre game change (Nov-25)

Source: Company Data, E&P Estimates. Note: Comments are like-for-like jackpot size. $5m jackpots are compared to $4m jackpots.

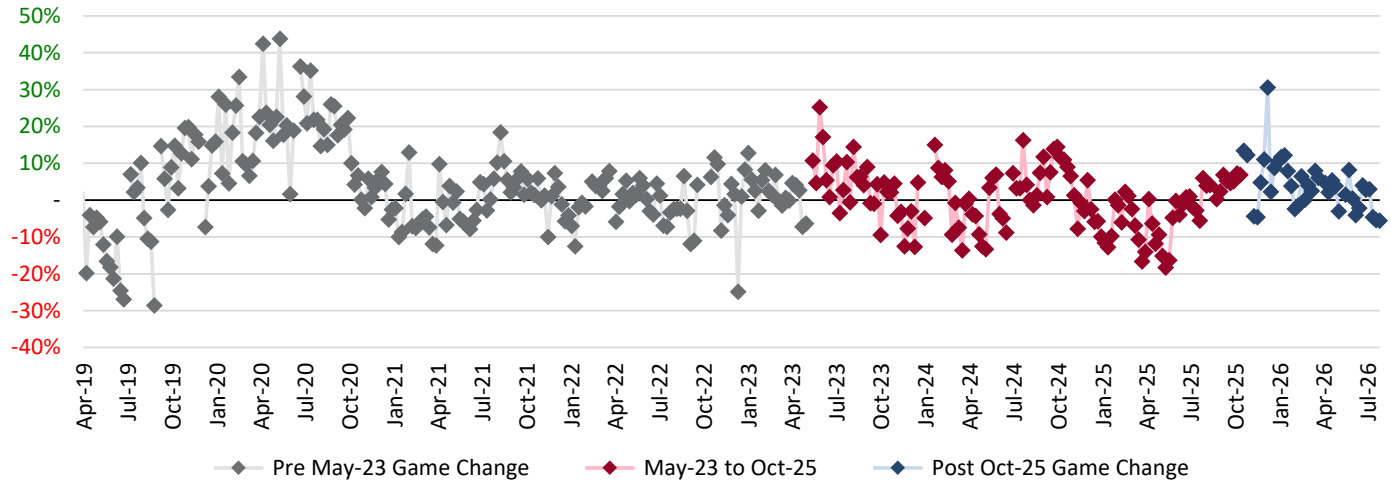

Exhibit 5 - Change in Powerball Like-for-Like Jackpot Entries & Sales post Nov-25 game change vs. the 12 months pre game change

Jackpot	Count	Entries Change	Sales Change	Note
5,000,000	8	-1.2%	+15.7%	< vs. $4m
10,000,000	6	-9.9%	+5.1%	
12,000,000	5	-10.7%	+4.2%	
20,000,000	9	-6.2%	+9.5%	
30,000,000	4	-6.5%	+9.1%	
40,000,000	4	-11.0%	+3.9%	
50,000,000	3	-8.5%	+6.7%	
60,000,000	1	-17.4%	-3.6%	
80,000,000	1	-11.0%	+3.9%	
Wt. Average		**-8.1%**	**+7.3%**	

Source: Company Data, E&P Estimates

When looking at Powerball over the long-run, LFL jackpot sales growth in FY26 was on aggregate stronger than FY25, but has trended downwards over the past 6-months.

Exhibit 6 - YoY growth in Powerball Like-for-Like Jackpot Sales (i.e. incl price changes)

Source: Company Data, E&P Estimates

Sequence Acceleration / Prize Reserve Fund

Powerball has both a base sequence and an accelerated sequence that were fairly consistent from FY21-FY25.

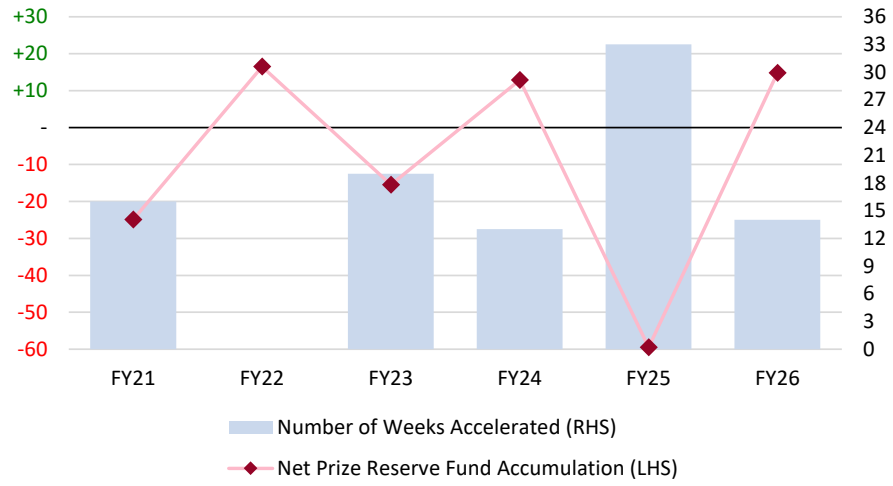

- Throughout FY25, the base sequence was $4m, $12m, $20m, $40m, $60m, $100m, etc.
- The accelerated sequence was $10m, $20m, $30m, $50m, $100m, etc.

As mentioned above, Powerball used a much slower sequence in FY26 than in FY25.

- For the first 24 weeks of the year, Powerball's sequence was $4m/$5m, $12m, $20m, $30m, $50m, $80m. This was the slowest sequence used since the May-23 game change.
- The remaining weeks were faster to varying degrees, but remained slower than FY25 on aggregate.

Acceleration is good for achieving higher theoretical sales outcomes, because you increase the probability of reaching larger jackpots throughout the year. However, acceleration usually depletes the prize reserve fund. This is because there are typically not enough entries throughout the sequence to support the advertised division-one jackpot (burger with The Lott). Thus, the prize reserve fund in FY25 depleted more than in any of the previous four years and TLC needed to slow the sequence down in FY26.

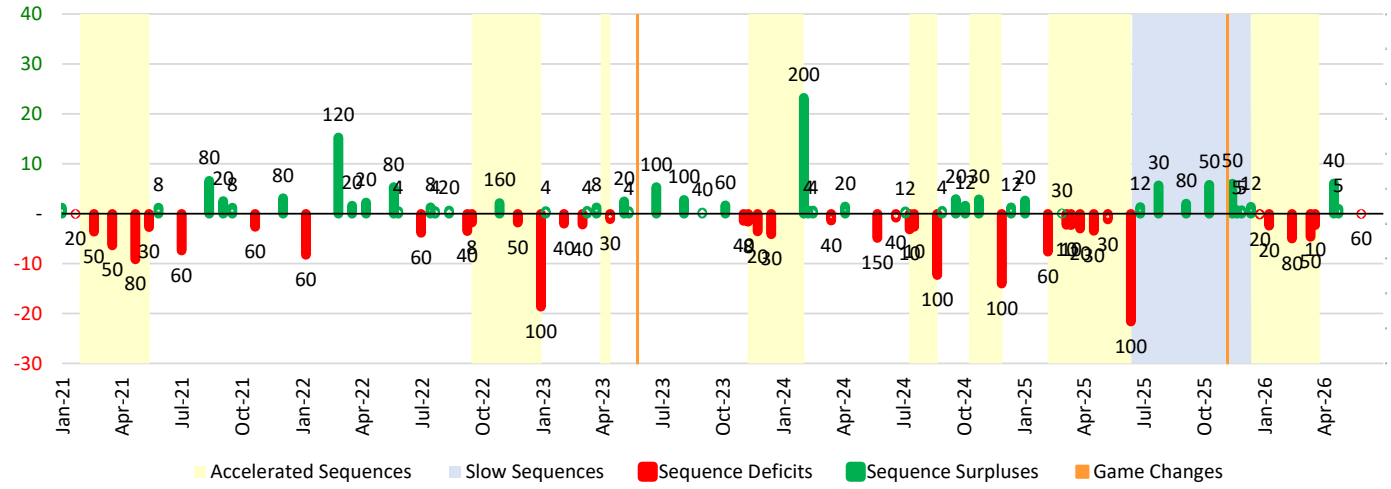

Exhibit 7 - Powerball Net Prize Reserve Fund Accumulation (LHS, A$m) & Number of Weeks using the Accelerated Jackpot Sequence (RHS)

Source: Company Data, E&P Estimates

Below, we demonstrate the accumulation/depletion of the prize reserve fund for each sequence over the past three years. The majority of base sequences have resulted in net sequence prize fund accumulation. By contrast, only 4/27 accelerated sequences have resulted in a net accumulation which includes the two largest jackpots ($160m & $200m).

Exhibit 8 - Powerball Net Sequence Prize Reserve Fund Accumulation (A$m) - jackpot as label (A$m)

Source: Company Data, E&P Estimates. Note: Includes WA

Monte Carlo Simulation Backtesting

Below we have back-tested prior years of Powerball to compare the actual sales against the theoretical outcomes. The objective is to identify how much of an impact jackpot randomness had on a given result and determine the appropriate baseline for future projections.

The lines in the chart below represent the theoretical outcomes for each given year, with the actual result as the marker. In order to increase sales, TLC needs either one of two things;

1. Luck/Favourable Draws - This will move the marker up along the line

- We note that jackpot outcomes are completely random and each year/week is independent of the prior year/week's result.

2. Improved Simulation Parameters - These will shift the entire line upwards.

Numerous factors go into determining these simulation parameters, including:

- Weeks in period,
- Starting jackpot,
- Game changes,
- Sequence impacts (acceleration),
- Like-for-like jackpot entries, and
- The prize reserve fund.

Factors such as the starting jackpot are short-term metrics, whilst LFL entries are more underlying factors reflective of the true strength of Powerball.

Below we can observe the following:

- The theoretical outcomes significantly increased post covid as the lines moved higher, before plateauing from FY21-FY23.
- In FY24, Powerball theoretical outcomes saw a jump due to the May-23 game change. However, the cherry on top for TLC was the favourable jackpot outcomes, which we estimate were in the 85th percentile and resulted in record turnover that remains +19.8% higher than any other year.
- As we previously mentioned, FY25 used the accelerated sequence the most, hence we estimate the theoretical outcomes to be a record high for Powerball. However, due to the bad luck, we estimate Powerball to have only been in the 6th percentile.
- Despite the benefits of the Nov-25 game change, the theoretical outcomes in FY26 were marginally lower than FY25 due to the slower sequences.

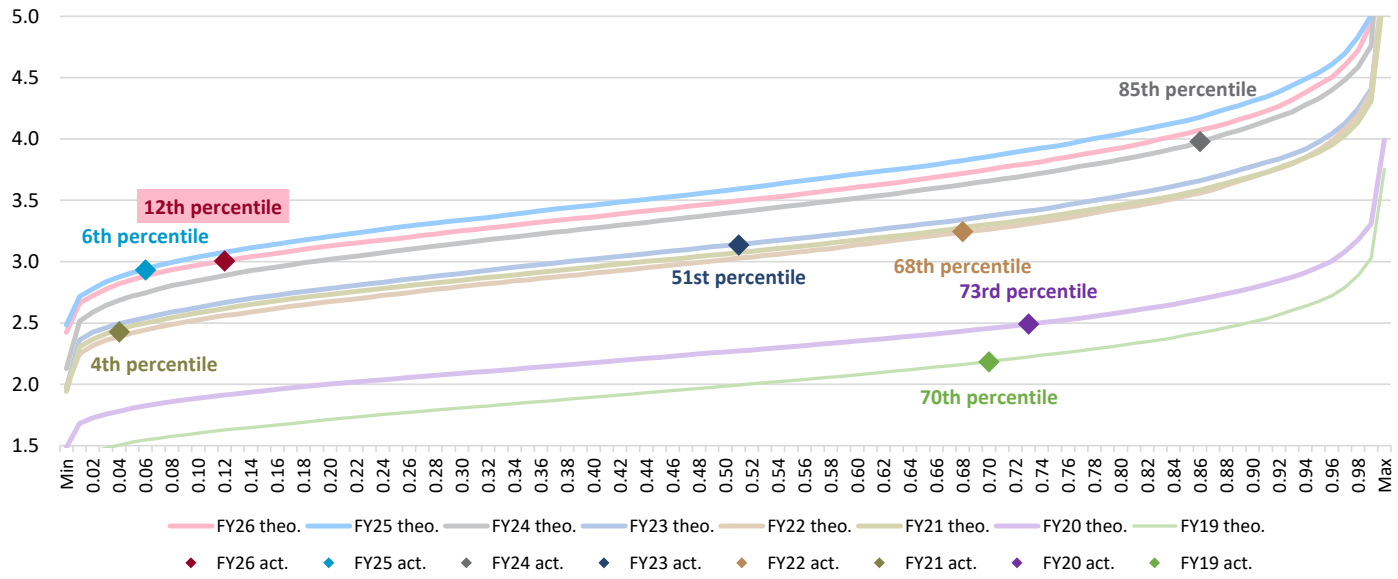

Going forward, our methodology for forward estimates is a reversion to the 50th percentile outcome.

- This would imply a +16.0% upward reversion vs our FY26 sales estimate.
- However, we then need to make adjustments for the simulation parameters for FY27.
  - The major factors include benefits from the Powerball game change (net impact of LFL jackpot entries) and a less depleted prize reserve fund.
  - These simulation benefits, in conjunction with the reversion to a 50th percentile outcome, would result in a 26.5% uplift.

However, we have had seven draws already in FY27.

- Our methodology is therefore the year-to-date turnover plus a 50th percentile outcome for a simulation for the remaining 45 weeks.
- Unfortunately for Powerball, it has been another poor start to FY27 with winning jackpots of $20m & $40m. Thus, our FY27 growth forecast is +18.6%.

Exhibit 9 - Powerball Monte Carlo Simulation Backtesting - Sales (A$m, y-axis), percentile outcome (#, x-axis)

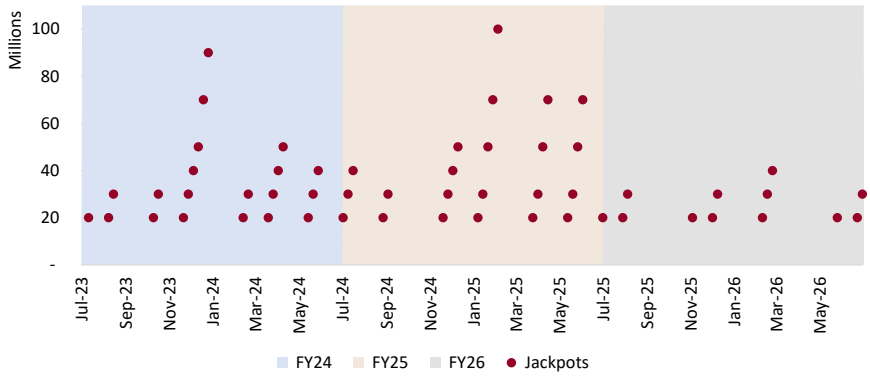

Source: Company Data, E&P Estimates. Note Includes WA.

Oz Lotto

FY26 Performance

Similarly to Powerball, Oz Lotto also suffered from a distinct lack of large jackpots. Oz Lotto failed to reach $50m, despite doing so 7x/10x in FY24/FY25.

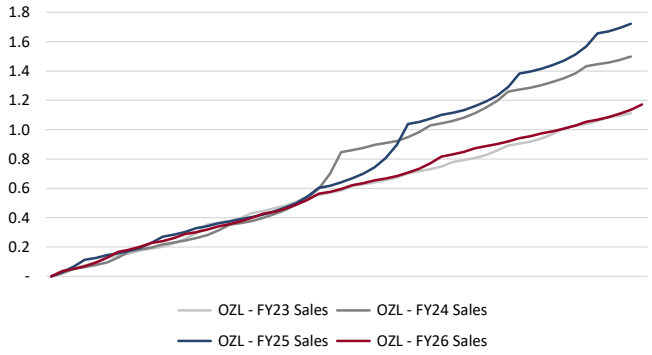

Exhibit 10 - Oz Lotto Jackpots >= $20m

Source: Company Data, E&P Estimates

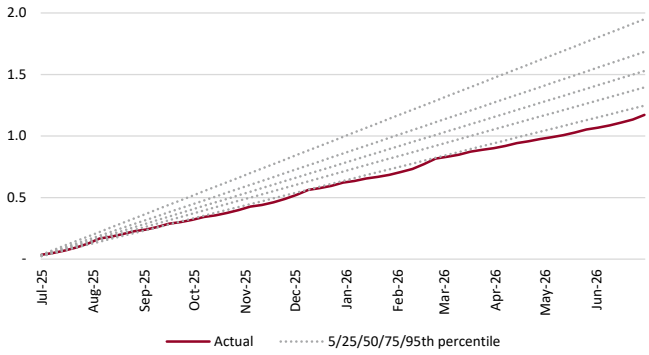

As such, Oz Lotto had an extremely unlucky year and finished in the 2nd percentile. Relative to FY25, turnover was down -31.9%.

Exhibit 11 - Cumulative Oz Lotto Sales (A$bn, y-axis) by week in year (x-axis) - YTD

Source: Company data, E&P Estimates. Note: Includes WA

Exhibit 12 - Oz Lotto Sales (A$bn, FY26) relative to Monte Carlo Simulation Percentiles

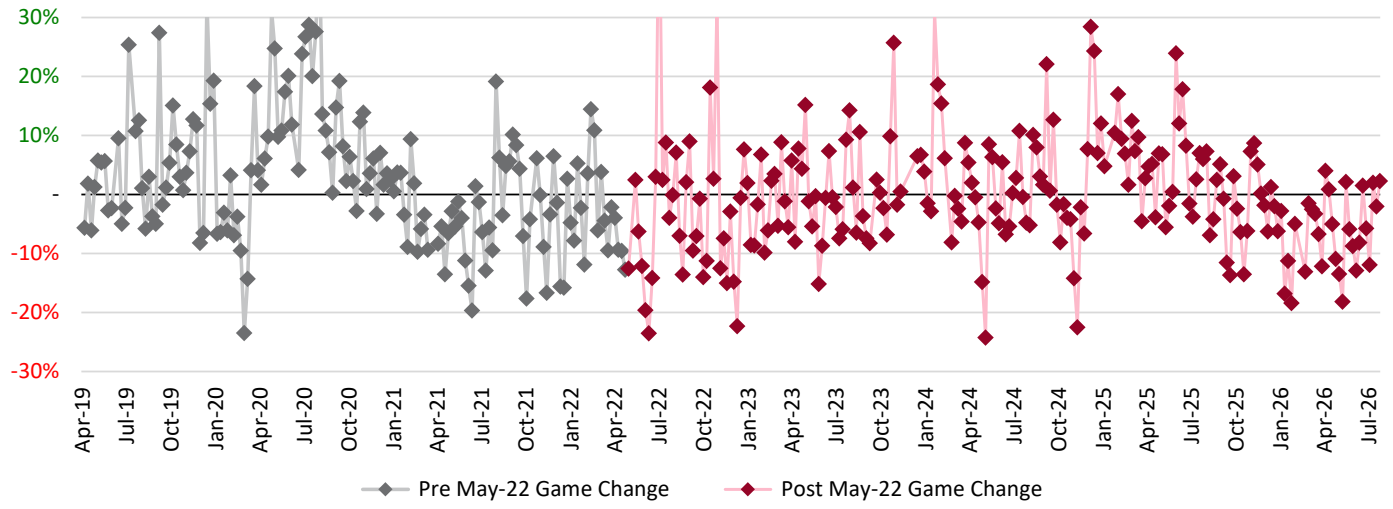

Source: Company data, E&P Estimates. Note: Includes WA

Like-for-Like Jackpot Entries

Similarly to Powerball, Oz Lotto LFL jackpot sales growth was softer in 2H26.

Exhibit 13 - YoY growth in Oz Lotto Like-for-Like Jackpot Sales (i.e. incl price changes)

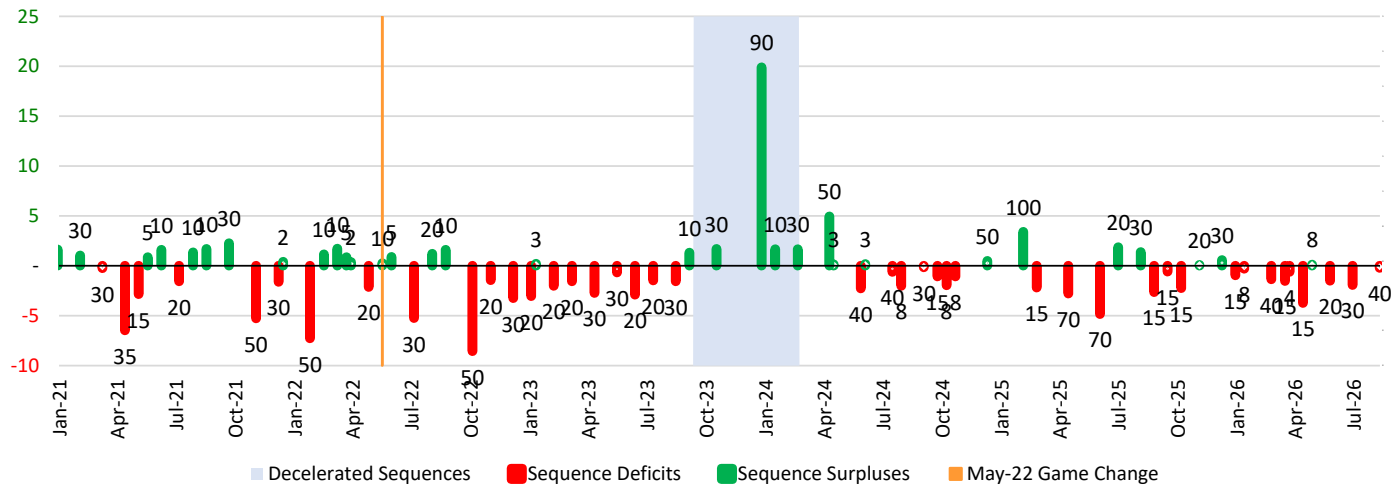

Source: Company Data, E&P Estimates

Sequence Acceleration / Prize Reserve Fund

We are flagging that management will likely need to slow the Oz Lotto sequence down soon. The most common sequence used over the past 5-years has on average resulted in a net sequence prize fund deficit, and we believe the prize reserve fund now sits near the levels it was when TLC last slowed the sequence down. We have previously observed that TLC are more likely to accelerate the sequence during periods of bad luck to reduce the overall volatility of the portfolio.

Exhibit 14 - Oz Lotto Net Sequence Prize Reserve Fund Accumulation (A$m) - jackpot as label (A$m)

Source: Company Data, E&P Estimates

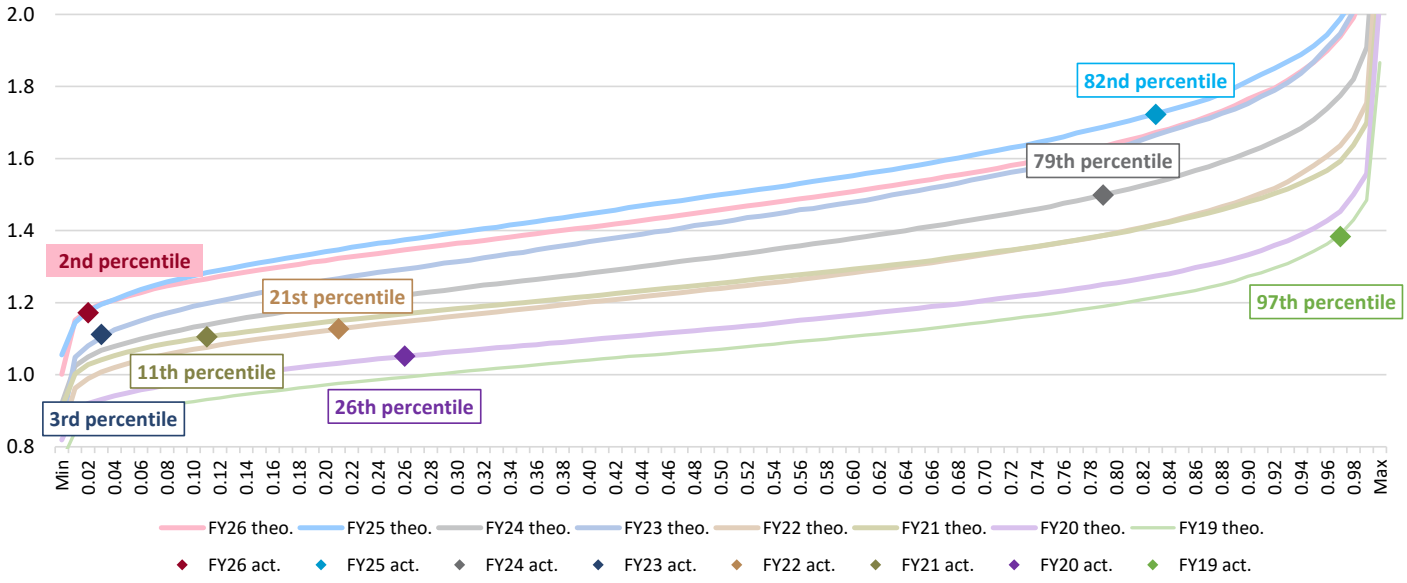

Monte Carlo Simulation Backtesting

Below is the same Monte Carlo backtesting chart explained above in the Powerball section but for Oz Lotto.

Interestingly, over the last 8-years, we estimate Oz Lotto has been either very lucky or very unlucky. As mentioned above, the absence of large jackpots unfortunately puts the FY26 Oz Lotto outcome in the latter camp (2nd percentile).

In theory the simulation parameters for FY26 were only marginally less favourable than FY25, but much stronger than FY24 which used slower sequences. However, subscriptions were -31.9%/-21.4% lower respectively.

Exhibit 15 - Oz Lotto Monte Carlo Simulation Backtesting - Sales (A$m, y-axis), percentile outcome (#, x-axis)

Source: Company Data, E&P Estimates. Note Includes WA

Saturday Lotto

FY26 Performance

Saturday Lotto turnover increased +9.3% vs FY25 to its strongest level since FY23.

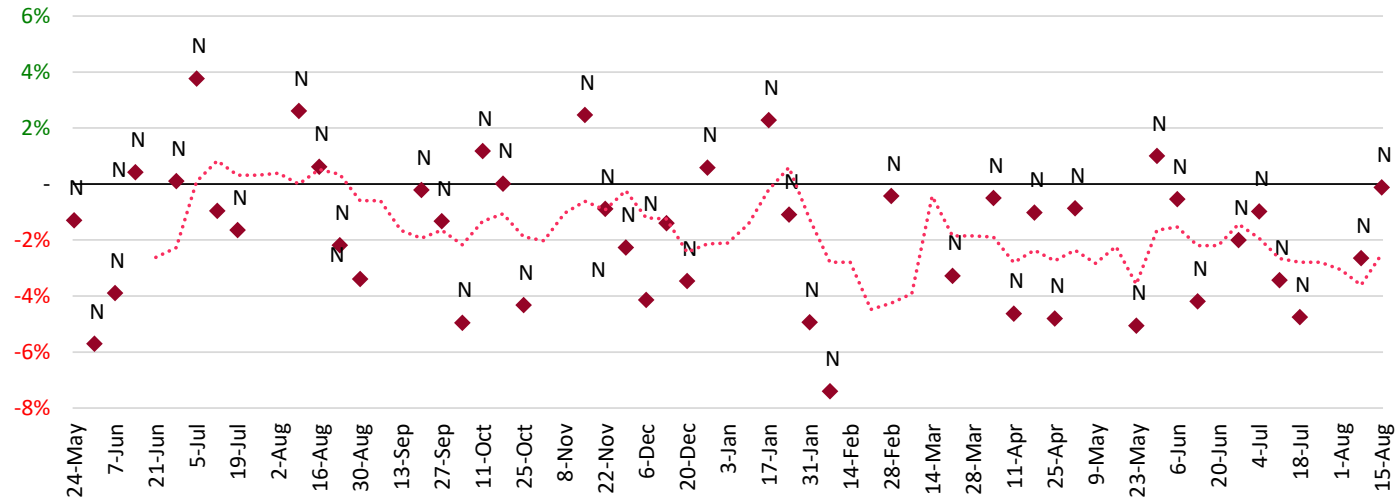

Like-for-Like Jackpot Entries

The key driver was the game change in May-25. The changes included a 10c increase in the subscription price and minor adjustments to the prize allocations. The primary objective of the change was to sustain the division-one prize at around $6m (previously around $5m).

The game change was designed to be predictable, as Saturday Lotto is Australia's heritage lottery game and typically skews towards older players who play the same numbers.

Thus far, the game change can be deemed a success. Of the forty-six normal draws, entries have only declined by an average of -1.7%. This is despite a +13.3% increase in the subscription price.

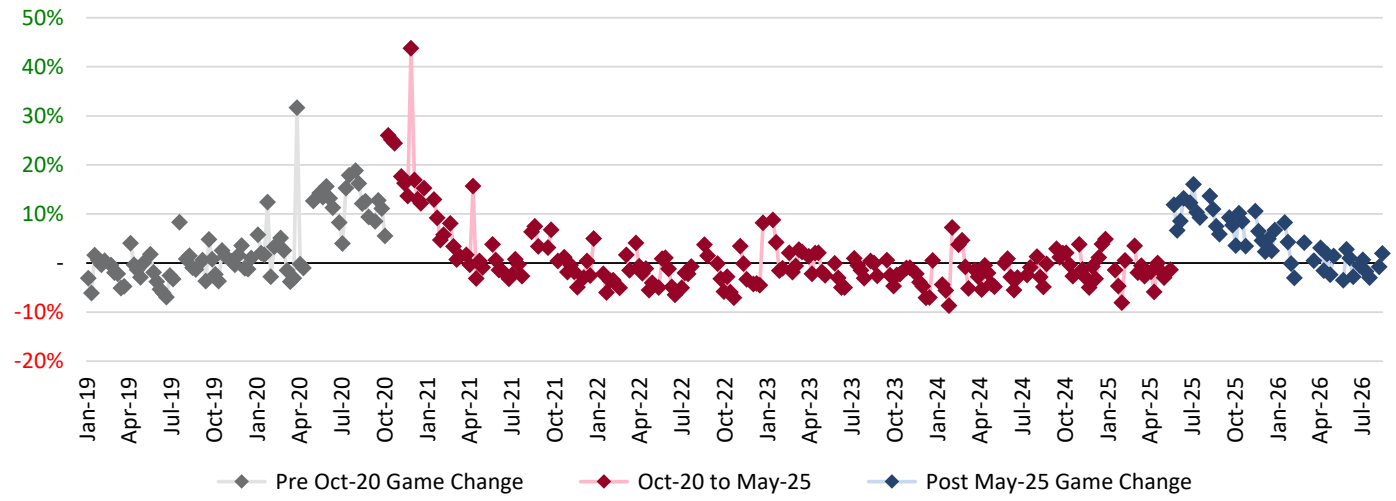

Exhibit 16 - Change in Saturday Lotto Normal Jackpot Entries vs. the 12 months pre game-change (May-25)

Source: Company Data, E&P Estimates

This led FY26 to be the first period of consistent YoY growth since covid. Recent draws are now beginning to cycle the game change and hence growth has moderated.

Exhibit 17 - YoY growth in Saturday Lotto Like-for-Like Jackpot Sales (i.e. incl price changes)

Source: Company Data, E&P Estimates

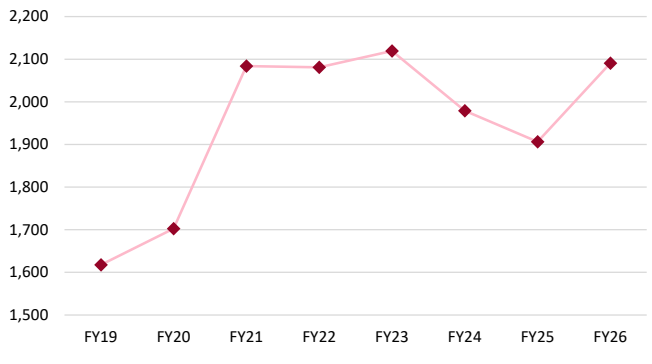

Prize Reserve Fund

Saturday Lotto's sequence is largely at the discretion of TLC's management and therefore is not subject to the same luck component as Powerball & Oz Lotto. However, it is still the second-largest game and sees some variation in turnover based on the timing of Super/ Megadraws.

We had previously written about our view that management had been attempting to smooth Saturday Lotto's performance (see here). FY21 saw a significant increase in LFL entries, which resulted in an overall increase in subscriptions. However, rather than immediately add more $20m Superdraws or $30/$40m Megadraws, management built up the prize reserve fund. Thus, from FY23-FY25, management was able to prop up extra Super/Megadraws to offset the declining LFL entries.

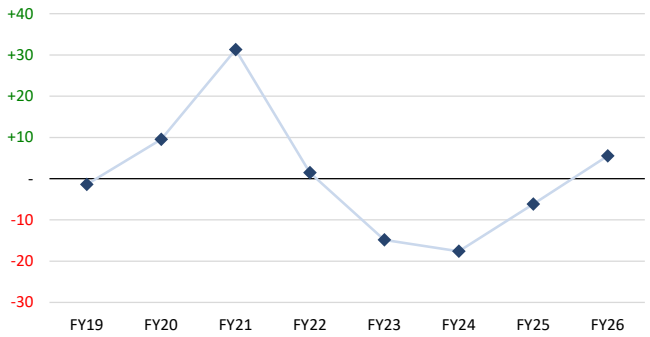

Management can only prop up the game for as long as they have the prize reserves to do so. Below we show that these had been depleting. However, the May-25 game change appears to have stabilised the game with both an increase in the subscriptions vs FY25 and the first prize reserve fund accumulation since FY22.

Exhibit 18 - Saturday Lotto Subscriptions (A$m)

Exhibit 19 - Saturday Lotto Net Prize Reserve Fund Accumulation (A$m)

Source: Company Data, E&P Estimates

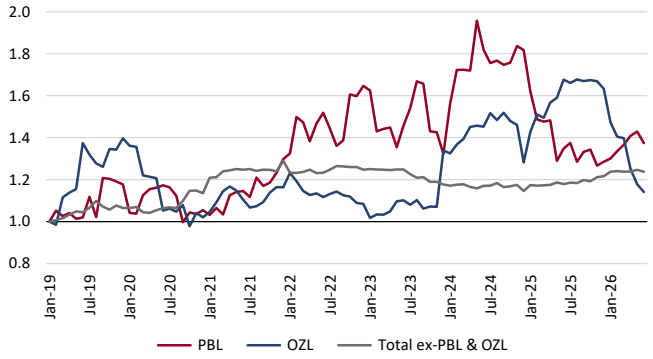

Long-Term Trends

Portfolio Composition

Below we demonstrate the longer-term performance of TLC's portfolio. Naturally, the two jackpot games, Powerball & Oz Lotto, have the most volatility given the structure of the games. Relative to pre-covid, both have outperformed the non-jackpot games despite recent bad luck.

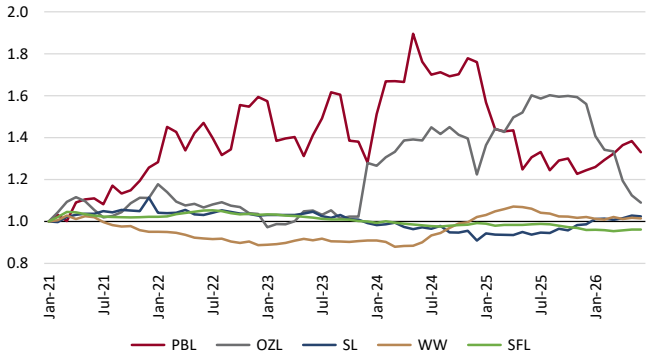

The non-jackpot games saw an initial boost during covid, but have been fairly flat since. The chart on the right demonstrates that each non-jackpot game is now around its respective Jan-21 index, with periods of growth driven by incremental benefits from corresponding game changes. Over the long-term, we expect the jackpot games to continue to outperform the non-jackpot games.

Exhibit 20 - Lotteries Turnover - 12 month Moving Average Total index (Jan-19 = 1.0)

Source: Company Data, E&P Estimates. Note Excludes Instants and Other Games.

Exhibit 21 - Lotteries Turnover - 12 month Moving Average Total index (Jan-21 = 1.0) Entries

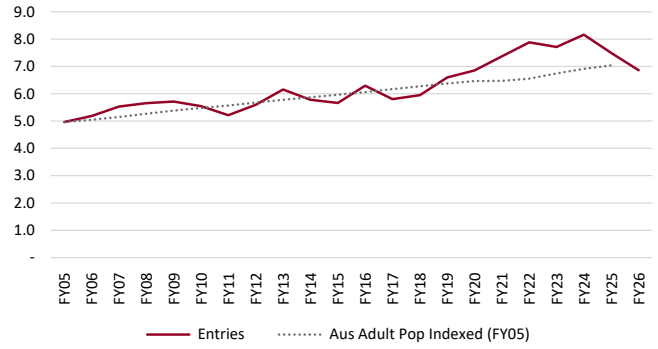

Source: Company Data, E&P Estimates.

Macro Trends

Below we show that since FY05, lottery entries have largely increased in proportion to the increase in the adult population. A breakaway from the trendline occurred during covid. Entries recently reverted below the trendline for the first time since covid, albeit primarily due to the very unlucky FY26 jackpot cycle.

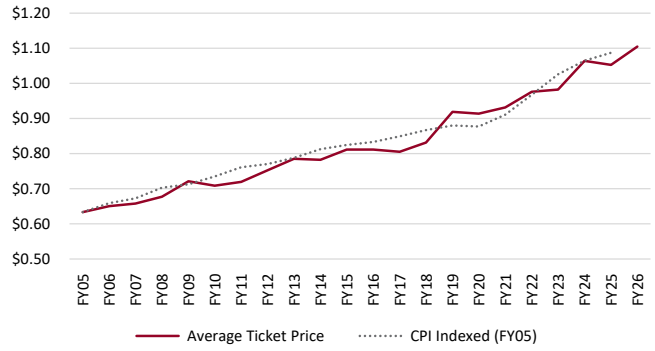

When looking at the average ticket price vs CPI, we see a strong correlation. This is not surprising as management has much greater control over this KPI via game changes.

Exhibit 22 - Lotteries Entries (bn.) vs. Australian Adult Population (indexed)

Source: ABS, Company Data, E&P Estimates.

Exhibit 23 - Average Ticket Price vs. CPI (indexed)

Source: ABS, Company Data, E&P Estimates

Turnover Estimates by Game

Below we show our turnover estimates by game for FY26 & provide commentary for our FY27 estimates for each of the games.

We are currently below consensus for each game in FY27 due to the soft LFL entries momentum. We then expect lotteries to be a key beneficiary of the Albanese gambling reforms and as such our turnover forecasts exceed consensus from FY29 onward.

FY27 Commentary

Powerball - An upward reversion to the 50th percentile in conjunction with the benefits of a full year of the game change.

Oz Lotto - An upward reversion to the 50th percentile, partially offset by a slower jackpot sequence and softer LFL entries.

Saturday Lotto - A small increase overall. Although there is good momentum, we are conscious that Saturday Lotto may have benefited from less cannibalisation that can come from large Powerball & Oz Lotto jackpots.

Weekday Windfall - A minor decline in-line with recent trends.

Set for Life - A slight uplift due to the impending game change in September.

Lucky Lotteries - A decrease given the Mega Jackpot went off recently.

Instants - No change as we have no data on this category.

Other - A minor increase as TLC expands its charitable lottery offering.

Exhibit 24 - FY26 TLC Lottery Turnover Forecast by Game (A$m)

Game	FY25A	FY26E	yoy%	vs. Cons

Charity Lotteries

In the next section we take a brief look at charity lotteries, which are small competitors to both TLC & Jumbo's B2C businesses. They also form a part of Jumbo's B2B SaaS business.

Below we show that the charities that have partnered with Jumbo have outperformed the non-Jumbo SaaS clients over the past few years. In particular, the Mater Foundation has seen a phenomenal growth in sales from $52.8m in FY21 to ~$176.0m in FY26 (+27.2% CAGR). This is after experiencing very little growth from FY15 to FY20 (pre-Jumbo).

Exhibit 28 - Lottery Revenue from Major Australian Charities (A$m)

	Units	FY14	FY15	FY16	FY17	FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26E

Note: State Lotteries includes retailer commissions. Charity Lotteries are a sample of the seven biggest by Sales.

FutureBall

FutureBall is the latest game launched by The Lottery Office (TLO) who are best known for being Australia's largest Foreign Matched Lottery platform (see here for our Deep Dive). In our last lotteries preview, we detailed how the Oregon Lottery announced new rules around courier services that may restrict TLO's foreign matched lottery operations in Oregon specifically (see here). Subsequently, the Albanese government's proposed gambling reforms would prohibit foreign matched lotteries in Australia via an amendment to the Interactive Gambling Act, albeit there have been recent media reports of some push back and the bill is currently being debated in parliament (see here).

We suspect that TLO launched FutureBall given the above regulatory uncertainty. FutureBall is a new game that was approved by the Northern Territory Government as part of TLO's recently extended licence. FutureBall is an Australian online lottery offering a fixed A $1 million division-1 prize with two draws per week. Unlike foreign matched lotteries, the game is structured as an underlying draw rather than a derivative of overseas lotteries.

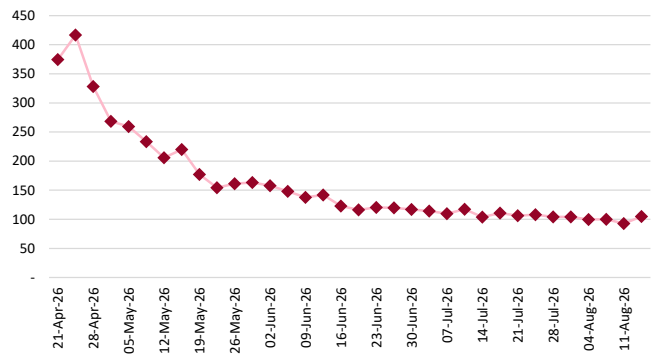

Thus far, FutureBall sales have been modest. Over the past month, sales have been ~100k per draw, which equates to annualised sales of ~$10m. This is much lower than the sales that we had forecast their foreign matched lotteries products to generate (~$100m) and only represents ~0.12% of traditional Australian Lottery sales.

Exhibit 32 - FutureBall

Changes to Forecasts and Valuations

TLC

- Turnover Forecasts
  - Very minor adjustments to FY26 turnover. We had already flagged in our Strategy Day Preview that the range of outcomes had become effectively capped without the prospect of any large jackpots and that consensus would need to downgrade (see here).
  - Downgrades to FY27 due to the recent softness in LFL jackpot entries.
  - Increase in FY28 & FY29 growth assumptions due to our view that traditional lotteries will benefit from the pending gambling reforms.

- Reduced Opex due to the guidance provided by management at their recent Strategy Day.
- Increased Capex assumptions.

Jumbo

We make no change to our Jumbo forecasts given our recent update following their FY26 guidance in July (see here).

Exhibit 34 - TLC Changes to Financial Forecasts

		FY26E	FY27E	FY28E
Revenue	**New**	**3,678.8**	**3,987.7**	**4,256.7**
	Old	3,679.5	4,183.0	4,329.6
	% change	-0.0%	-4.7%	-1.7%
EBITDA	**New**	**738.8**	**822.9**	**888.1**
	Old	731.9	866.0	898.4
	% change	+0.9%	-5.0%	-1.1%
NPAT	**New**	**347.6**	**358.9**	**392.1**
	Old	345.4	383.7	391.1
	% change	+0.6%	-6.5%	+0.2%
Valuation	**New**	**$6.05**		
	Old	$6.10		
	% change	-0.9%

Our Forecasts vs Consensus

TLC

Overall we are broadly in-line with consensus for TLC's FY26 result. Segment wise, we are marginally below consensus for Lotteries but ahead for Keno.

Jumbo

As mentioned above, Jumbo recently provided guidance and as such we are in-line with consensus for the group numbers. Segment wise, we are marginally below for Lottery Retailing EBITDA but ahead for Dream Giveaways.

Exhibit 35 - E&P vs Consensus Estimates - TLC FY26

	Units	E&Pe FY26E	VA Cons. FY26E	E&Pe vs VA Cons.
Group Headline Numbers				
Revenue	A$m	3,678.8	3,688.2	-0.3%
EBITDA	A$m	738.8	738.0	+0.1%
NPAT	A$m	347.6	348.2	-0.2%
Segment EBITDA				
Lotteries	A$m	624.4	627.1	-0.4%
Keno	A$m	114.4	111.0	+3.1%
KPI's				
Lotteries Turnover	#	6,545.0	6,584.0	-0.6%
Lotteries Digital Penetration	#	41.7%	41.9%	-0.2ppts

RESEARCH RECOMMENDATION DEFINITIONS

Positive	Stock is expected to outperform the S&P/ASX 200 over the coming 24 months.
Neutral	Stock expected to perform in line with the S&P/ASX 200 over the coming 24 months.
Negative	Stock is expected to underperform the S&P/ASX 200 over the coming 24 months.
Speculative Buy	Stock has limited history from which to derive a fundamental investment view or its prospects are highly dependent on event risk, e.g. Successful exploration, scientific breakthrough, high commodity prices, regulatory change, etc. Consequently, the stock is considered a high-risk investment which may be prone to high volatility in share price movements, have a greater risk of capital loss and/or the stock may have low liquidity.
Suspended	Stock is temporarily suspended due to compliance with applicable regulatory and/or E&P policies in circumstances where E&P is acting in an advisory capacity.
Not Rated	Stock is not included in our investment research universe.

Research Criteria Definitions

Recommendations are primarily determined with reference to how a stock ranks relative to the S&P/ASX 200 on the following criteria:

Valuation	Composite of Rolling 12-month prospective multiples and discounted cash flow (DCF), or DCF for resource stocks.
Earnings Outlook	Forecast 2-year EPS growth.
Earnings Momentum	Percentage change in the current consensus EPS estimate for the stock (rolling 1-year forward basis) over the consensus EPS estimate for the stock 3 months ago.
Shareholder Returns	Composite of forecast ROE (rolling 1-year forward basis) and the percentage change in ROE over 2 years.
Debt Servicing Capacity	Rolling 12-month EBIT Interest Cover ratio.
Cyclical Risk	Qualitative assessment of the 2-year outlook for a stock/industry's profit cycle.
Industry Quality	Qualitative assessment of an industry's growth/returns potential and company specific management capability.
Financial Transparency	If we don't understand it, we won't recommend it.

For stocks where Evans and Partners does not generate its own forecasts, Bloomberg consensus data is used. Analysts can introduce other factors when determining their recommendation, with any material factors stated in the written research where appropriate.
